DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 2, the phrase "preferably" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Tretinyak (US 4403617) or Saito (US 5968022) or Higuchi et al. (US 7070583 which is used as a translation for WO02/02161).

Regarding Claims 1-2, Tretinyak ('617) discloses a biopsy needle which is similar to a micro pipette, comprising an oblique opening in that the surface of the opening of the holding end of the micropipette is at an acute angle with the ordinate axis of the holding end which is less than 90 degrees (Col 1, lines 34-44; Col 2, lines 35-61 and figures 2-4).

Regarding Claims 1-2, Saito ('022) discloses a biopsy needle which is similar to a micro pipette, comprising an oblique opening in that the surface of the opening of the holding end of the micropipette is at an acute angle with the ordinate axis of the holding end which is less than 90 degrees (Col 3, lines 1-18; Col 4, line 27- Col 5, line 17 and figure 3).

Saito also discloses that it is well known in the art to have an end portion of the cylinder ground along a flat plane extending in an oblique direction relative to the axis of the tube or hollow cylinder in the direction that converges with the longitudinal axis of the cylinder at an acute angle (Col 1, lines 37-43).

Regarding Claims 1-2, Higuchi et al ('583) discloses a biopsy needle which is similar to a micro pipette, comprising an oblique opening in that the surface of the opening of the holding end of the micropipette is at an acute angle with the ordinate axis of the holding end which is less than 90 degrees (Col 1, line 54- Col 2, line 45 and figure 1).
